

Mobile devices, cloud platforms, and workspace management software effectively free businesses and their employees from location and time constraints.

With increasing access to information and people, teams can consist of talented individuals located anywhere in the world. However, just bringing together capable people doesn't guarantee success. For collaboration to work, the right tools need to be adopted and used. Flexibility through mobility and seamless workflow are mandatory for maximizing productivity. Project deliverables and team communications have to transfer smoothly from desktop to laptop to tablet and to mobile devices. Many companies still struggle with integrating the best collaboration and mobility technology to achieve their performance goals.

Networking For Future (NFF) Solutions

When choosing or migrating to collaboration and mobility solutions, you need to select an integration partner with extensive experience. NFF offers 25 years of expertise in collaboration and mobility solution design, implementation, and migration processes.

During the transition from in-person to remote and hybrid work scenarios, effective communication, training, and support are the mainstay of NFF's successful collaboration and mobility integration projects. Our solutions enable your teams to work and communicate securely from remote locations, increasing efficiency and productivity.

Some of the NFF collaboration and mobility solutions:

- Secure remote network access via virtual private network (VPN)
- Mobile Device Management (MDM)
- Voice, Voice over IP (VoIP), and video calling
- Video, web, and audio conferencing
- Interactive whiteboards
- Desktop sharing
- Smart meeting spaces
- HyFlex Classrooms
- Instant Messaging (IM) and Presence information
- Collaboration and mobility solution training tools

Impactful ways you can leverage the interconnected NFF solution:

- **Highly flexible workspace**

Seamlessly integrating multiple points of participant entry into a workspace enables your employees, clients, and staff to participate in meetings and virtually, regardless of their platform or location. Flexibility is part of our ever changing work environment. Through our collaborative solutions, work can be something you do, not somewhere you go.

- **Collaboration is moving beyond voice and video**

As the collaboration space continues to evolve, organizations need to deploy software applications that provide employees with the dexterity necessary to thrive in today's business world.

- **Training on collaboration and mobility applications**

A collaboration and mobility application cannot just be another desktop icon that nobody knows how to use. Instead, software applications need to become immersive environments that provide teams with everything they need to get their jobs done. Employees will be able to collaborate with their coworkers and their external business partners in real time — no matter which platforms they're using.

- **Enhance your visibility, knowledge, and control**

Communication across mobile applications is faster and simpler than keeping up with long email threads. Your teams can leverage constant updates on progress, challenges, and business operations, empowering faster and smarter decision making.

- **Improve workflow and project management**

With mobility you can improve organizational processes by sending and receiving real-time reports while actively monitoring progress onsite. These technologies give you and your organization's stakeholders an active view into projects and builds as they occur — enabling greater transparency so your workforce can proactively navigate challenges before they become serious roadblocks.

- **Ensure security**

Collaboration and mobility solutions allow for teams to access the company network and sensitive data from remote locations, driving efficiency and innovation. However, increased access from offsite locations presents the risk of cyberattack. Ensuring that user access and connections are secure is absolutely critical. NFF utilizes a zero-trust approach to ensure that only authorized users have access to the network and sensitive data, preventing a devastating cyberattack.
