

**WASHINGTON, July 10, 2023** — Networking For Future, Inc. (NFF), a performance-focused IT solutions provider, announced today that they have become an Axis Communications Partner as part of their ongoing effort to enhance their Smart Technologies solutions portfolio.

NFF provides strategic and secure smart cities and smart campus solutions backed by their network and security professional services team and their Network Operations Center (NOC) with a focus on the state, local government, and education markets.

Axis Communications was a pioneer in network-based cameras and IoT devices and continues to lead those markets. Axis provides intelligent network video, audio, access control, thermal, radar and other IoT solutions for government, education and business applications that meet technical and procurement compliance requirements, while innovating for a smarter, safer world.

Per Mike Cannon, Smart Technologies Executive Advisor at NFF, “Since so many of our current network and cyber security clients utilize Axis solutions, and Axis’ focus on network based cameras and sensors, adding them to our smart technologies’ portfolio was a logical next step in the ongoing growth of our practice.

It’s clear that Axis is the leader of providing intelligent solutions for government and education with enhanced video analytics, edge-based capabilities, the most hardened platforms, and engrained open-source approach to partners with best-of-breed solutions. We’re very excited about adding them to our services and smart technology solutions capabilities.”
