extension capabilities
beyond DNA entitlements

Enhance

Extend support
engagement & TE
expertise access

Unlock Full Visibility and Faster Resolution with NFF and ThousandEyes

How to Maximize Cisco DNA Investments with NFF Network Assurance for Cisco DNA

Don't let your Cisco DNA entitlements go underutilized. Organizations that have invested in Cisco DNA Advantage or Premier subscriptions receive built-in entitlements to ThousandEyes, a network intelligence platform that provides end-to-end visibility and analytics across the internet, cloud and enterprise networks. However, many of these entitlements remain unused or underutilized due to resource constraints, lack of awareness, or uncertainty around the platform's benefits.

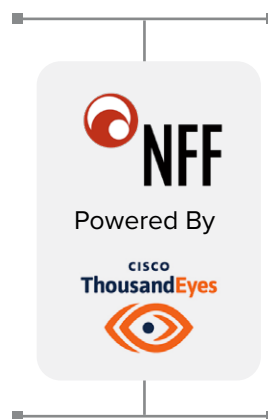

With NFF's Network Assurance for Cisco DNA, you gain real-time visibility, faster incident resolution and a better digital experience for every user, without overwhelming your internal teams. Let NFF activate, elevate and enhance your ThousandEyes entitlements so your IT staff can focus on what matters most.

While ThousandEyes provides visibility across complex, distributed networks, realizing it's full value requires:

- Specialized knowledge
- Continual tuning
- Reporting and analysis

With NFF continuously optimizing your ThousandEyes' services, customizing dashboards and interpreting telemetry data, you will:

- Reduce downtime
 - Enhance your user's experience
 - Stay ahead of performance bottlenecks
- Your internal IT staff is free to focus on core initiatives and operations.

NFF's Network Assurance Services delivers:

- Expertise to unlock and leverage ThousandEyes
- Powerful monitoring and visibility capabilities
- Release from extra burden on internal teams

NFF Network Assurance Services is a turnkey, scalable and flexible managed service that rapidly activates ThousandEyes monitoring agents, including:

- Enterprise
- Cloud
- Endpoint Agents

How NFF Network Assurance for Cisco DNA Works

	Feature	Description
Activate	Onboarding and setup of TE for full use of DNA Entitlement	
	Platform Activation	Rapid onboarding with immediate capabilities for critical service monitoring.
Elevate	Immediate expansion and extension capabilities beyond DNA entitlements
